

Introduction to ICT in Agric Training

Agriculture employs over 75% of the country workforce. Yet the demand for agricultural produce keeps increasing as the population swells while many of the small-scale farmers aren't able to meet up with the demands.

According to a report from the UN Department of Economic and Social affairs, Nigeria is projected to be the world's third populous country by the year 2050.

This is an urgent need to think out of the box, be creative and innovative if we want to feed our teeming population.

ICT is the vehicle that drives development in all sector of the economy, including agriculture.

It enables farmers use research data and adopts technology necessary to accelerate growth in the agricultural sector.
